MAKI for PREGO

MAKI puts the power of PREGO into a compact, professional console

MAKI has many advanced lighting control interfaces.
These include: an illuminated intensity or rate wheel,
four illuminated attribute wheels, and a detachable 10" touch screen.

Further controls are: a dedicated crossfader with GO button,
a numeric keypad, dedicated function keys, and 24 or 48 submasters.

DMX output is available via DMX or Ethernet port.
All industry standard DMX network protocols are supported.
The PREGO licence selected determines the number of available DMX universes.

PREGO lighting software has a proven track record in professional lighting. We have focused the full power of PREGO for practical use in theatres and studios. **MAKI**'s robust and portable design is prefect for dynamic and creative working environments. PREGO provides all the functions needed for today's multi-fixture entertainment world.

The clear and logical structure of the PREGO software is unsurpassed. It is an easily mastered, yet powerful tool for modern stage lighting.

MAKI Housing Design

The console is made out of a quality steel plate. There is an aluminium rail at the back edge for fixing accessories e.g. Lilliput monitor and protecting the connectors.
Solid beechwood ends complete the **MAKI**'s robust design.
